

ATTENTION COMMUNITY MEMBERS OF GEORGINA ISLAND

As of May 11, 2015 the community water supply has received multiple readings that don't meet regulations. As mentioned at the Coldwater Community meeting if these readings were to continue we would issue a Boil Water Advisory. Please be aware our Water Operators, with Chief and Council are working together on various techniques to ensure safe drinking water. Please bring drinking water to a full boil for at least 1-5 minutes until you receive official notice that these precautions are no longer required.

****The health parameters are not an immediate physical concern issue but Chief and Council wanted to take this precautionary step to ensure the highest safety of the residents for drinking water. Chief and Council, with the Water Plant Operators, have a staged plan to address these health parameters issues over the next few months. Should you have any questions, please contact the administration office****

Thank you for your patience and cooperation.
